**To play the Number Sentence Game**

You need a set of cards numbered from 0 to 12 for each player and two dice for each game.

The players arrange their cards face up in front of them. In turn they throw the two dice. The scores may be added, subtracted, multiplied or divided.

Thus a throw of a 6 and a 2 can give 8, 4, 12 or 3. Only one number each go may be selected. When the player has decided which number it is to be they turn over that card stating what they have done, for example, "6 times 2 is 12".
